## Natural Gas Igniting Higher

## Natural Gas: Recovery Mode

# Natural Gas - Recovery Mode

- Since the start of the US-Iran war, we have witnessed significant price differential between Natural gas prices across the globe
- Supply disruptions (Qatar outages + Strait of Hormuz risks) have pushed European (TTF) and Asian (JKM) prices to multi-year highs
- **Despite tight global gas markets, Henry Hub Natural Gas remains weak due to domestic factors, and since MCX prices are linked to it, they have also stayed subdued**
- Shoulder season (Apr–May) = low heating + delayed cooling demand → also added to the recent weakness in Natural gas prices
- However, the price spread between US and global markets persists due to infrastructure bottlenecks, not lack of demand
- US LNG terminals are running near full capacity (~18–19 Bcf/d), preventing global demand from pulling more gas out of the US for now
- New LNG capacity (5.5–6 Bcf/d by 2027) will unlock exports and allow global tightness to reflect in US prices
- EU inventories are well below normal and require aggressive LNG imports, keeping global prices elevated
- Asian markets are offering a premium over Europe, leading to cargo diversion and intensifying competition for LNG supply
- Rising US cooling demand in the months ahead (power burn) could slow storage builds amid increased reliance on US LNG exports
- LNG demand, electrification, and data center growth create a sustained bullish demand outlook
- **With export capacity expansion ahead and global supply expected to remain tight, Henry Hub is likely to trend higher from current levels, making natural gas a BUY on dips.**

# MCX Natural Gas Technical Update

- MCX natural gas has been trading in a downward sloping channel but recently has reversed strongly and has given a breakout of the formation confirming positive move for short-term
- The counter has struggled below ₹254 but recently a break and sustained trade above the same is confirming strength in price
- Buying at ₹272 is recommended targeting ₹305 however our bias for the counter will be negated if price break and closes below ₹254

# MCX Natural Gas Technical Update

- NYMEX Natural gas also has given a positive breakout of falling channel which is confirming further strength in price for short-term
- The counter was facing stiff resistance around \$2.67 but sustained break above the same is indicating strength followed by a channel breakout
- Overall bias looks positive and buying at \$2.830 is recommended targeting \$3.20 however, our view will be invalidated on sustained close below \$2.67
