

Guar Seed

NCDEX Guarseed continues to maintain a positive structure, trading above the 20 EMA while holding within the broader Rising Wedge formation. Prices are gradually moving towards the upper boundary of the pattern, with 6,500 (R1) acting as the immediate resistance, while a decisive breakout could extend the rally towards 6,700 (R2). In the near term, a healthy pullback towards 6,050 is possible, and this level is expected to act as the first support zone. If prices sustain around 6,050, it could provide a dip-buying opportunity for the next leg of the uptrend. However, a break below 5,850 may weaken the near-term bullish structure. Outlook: Bullish bias remains intact as long as 6,050 holds, with 6,050 being the key level to watch for buying interest on dips.

Guargum

NCDEX Guargum is showing signs of renewed strength after reclaiming the 20 EMA, although prices continue to face resistance near the descending trendline. The overall structure has improved, but a decisive breakout above 12,400 (R1) is required to confirm further upside towards 12,700 (R2). In the near term, a healthy pullback towards 11,900 is possible, and this level is expected to act as the first support zone. If prices sustain around 11,900, it could provide a dip-buying opportunity for the next leg of the uptrend. However, a break below 11,500 may weaken the near-term bullish setup.Outlook: Positive bias remains intact as long as 11,900 holds, with 11,900 being the key level to watch for buying interest on dips.

Jeera

NCDEX Jeera continues to trade with a weak bias after facing rejection from the upper boundary of the Rising Wedge and slipping below the 20 EMA, indicating that selling pressure still persists. Prices are hovering near the 20,500 (S1) support zone, making this a crucial level to watch in the near term. A pullback towards 21,150 (R1) is possible if buyers defend the current support zone, but stronger upside confirmation is likely only after prices sustain above 21,150. On the downside, a decisive break below 20,500 could extend the correction towards 20,300 (S2). Short-term bias remains cautious below 21,150, while 20,500 is the key support to watch for either a reversal or further downside confirmation.

Turmeric

NCDEX Turmeric continues to maintain a strong bullish structure after confirming the breakout from the long-term Cup & Handle pattern. Prices are comfortably trading above the 19,300 breakout zone and the 20 EMA, indicating that the broader uptrend remains intact. In the near term, a healthy pullback towards 20,500–20,000 cannot be ruled out, and this zone will be crucial to watch for price reaction. If the breakout level sustains, the broader uptrend is likely to remain intact with upside potential towards 23,300 (R1), followed by 25,000 (R2). Bullish bias remains intact as long as 19,300 holds, while the 20,500–20,000 zone should be watched closely for dip-buying confirmation or a reversal signal.
